Cognitive Science: How Deep Approaches To Learning Promote Metacognitive Strategies to Enhance Integrative Learning
Mildred Pearson – EC/ELE/MLE, Eastern Illinois University
Daniel Harvey – Letters and Sciences, University of Wisconsin-Milwaukee

This research examines how deep approaches to learning assist students in developing metacognitive strategies to enhance integrative learning. A triangulational study was conducted through the use of two surveys. Student data consist of a questionnaire with adaptations from the National Survey of Student Engagement (NSSE) 2008. Faculty data stems from the Faculty Survey of Student Engagement (FSSE) with permission from Dr. Laird, Project Manager. Deep approaches to learning promote strategic thinking, critical thinking, reasoning skills, connections to relevant learning, and creativity. Thus, students are able to integrate information learned and apply it beyond the four walls of a classroom.

Engaging Voices of Disconnected Learners in Urban Environments
Mildred Pearson – EC/ELE/MLE, Eastern Illinois University
Agnes Virgin Williams – Educational Policy, University of Wisconsin-Milwaukee

Success in school is critical for urban youth. This study reports on ten coaches effort to engage urban high school students in social action projects in a charter school that adopted the Public Achievement model of civic engagement. The coaches, who were graduate students, worked with ten groups of six to twelve students who were required to participate. This study draws from fieldnotes and interviews of each coach and examines their experiences of helping students think critically about community issues. This calls for families, communities, and schools to build social networks; providing children with social capital necessary to achieve.

iBooks for iPads for You?: Exploring iBook Author as a Collaborative Tool
Chris Penna – English, University of Delaware
Debra Jeffers – Information technology Client Support, University of Delaware

This presentation explores iBook Author for the iPad as a tool for student collaboration. It describes how students in a literature course collaborated on writing a handbook using iBook Author. At the same time, students also had the opportunity to create similar content for a class wiki. At the end of the course, students were surveyed about the two approaches in terms of generating engagement with the subject matter and enhancing their learning. Building on this example, participants will discuss whether this tool can be purposefully integrated into a variety of disciplines to generate greater student engagement and interactive learning.

“Is anybody in there?” Promoting Intellectual Engagement in the Classroom
Lysandra Perez-Strumolo – Psychology, Ramapo College

Do you ever get the feeling that while your students are physically in your classroom they are really somewhere else? As part of a faculty development initiative, faculty members read Elizabeth Barkley’s (2010) Student Engagement Techniques and then went to work to engage the unengaged. Focused on the need to improve participation in class discussion, presenters designed and implemented activities to engage their students in critical thinking and to promote intellectual discussion in the classroom. In this session, we will discuss engagement techniques and our experiences in implementing them. Challenges, successes and student data will be discussed.
